(57) Abstract: A surgical device comprises a first portion (2) and a second portion (8), the first and second portions (2, 8) being releasably connected together by means of cooperating first and second formations (10, 12), the first formation (10) being formed on the first portion (2), and the second formation (12) comprising a resilient arm which is formed on the second (10) portion (8) and engages the first formation on the first portion (2). Preferably, the resilient arm is integrally formed with the second portion.
